

UNIFY ETHERA LIBRARIES INSTALLATION

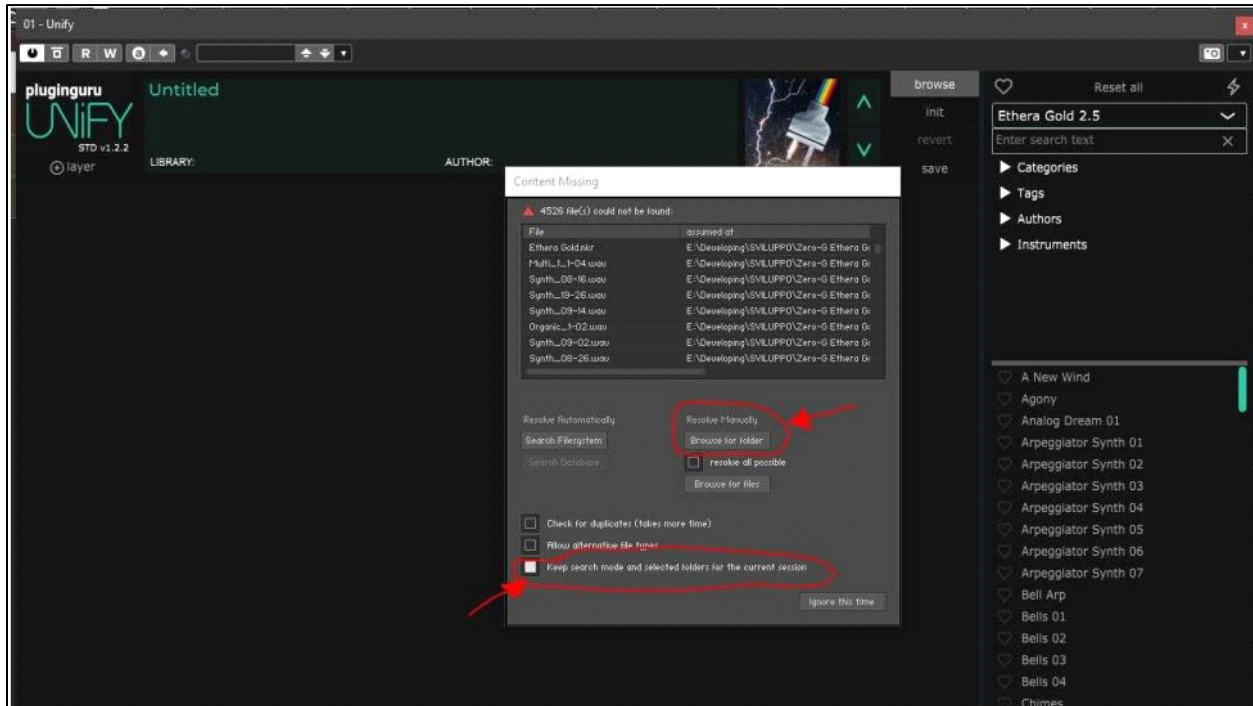

1. Unzip The File
2. Load UNIFY STAND ALONE and DRAG & DROP the .guru file into UNIFY

When completed close UNIFY STAND ALONE, now you can load you DAW with UNIFY PlugIn.

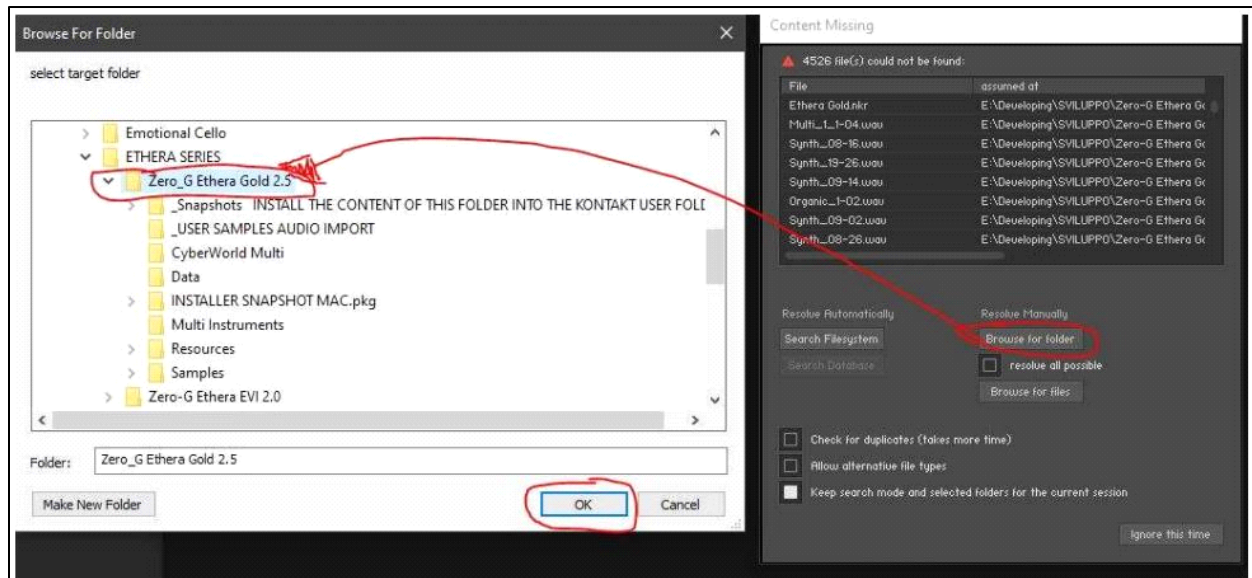

3. On Loading an ETHERA patch for the first time, KONTAKT will prompt you to locate the samples for ETHERA.

Tick the KEEP SEARCH MODE AND SELECTED FOLDER FOR THE CURRENT SESSION.

Then Click BROWSE FOR FOLDER and navigate to where ETHERA is installed on your sytem and select it and click on OK.

Now I Suggest a creation of a Session Template on you DAW with Just an instance of Unify with an ETHERA Patch Loaded, so the Content Missing is fixed for ever, and you can start from your Unify Template for your DAW.
